

Make a cardboard-roll shark

Over 70 shark species live in New Zealand waters – each one different.

You need:

- Cardboard rolls
- White paper
- Scissors
- Paints
- PVA glue

- 1** Start to peel away a layer of cardboard from the roll.

- 2** Cut the peeled-away part into a triangle for your shark's dorsal (back) fin.

- 3** Cut out a tail and caudal (side) fins from the offcuts.

- 4** Glue on your tail and caudal fins.

- 5** Cut two big triangles from the non-tail end of the roll to make your shark's mouth.

- 6** Cut rows of triangular teeth from white paper, and stick them into the mouth.

- 7** Paint your shark. This one is a great white!

- 8** To make different shark species, you can cut the mouth differently, use other colours – even flatten the roll a bit. This one is slightly flat, with a long snout. Its teeth are not obvious and it has friendly eyes. It's a blue shark.

- 9** Here are a bronze whaler and a whale shark. Whale sharks are the largest living fish in the world, so to make one, use an extra long roll. Squash it flatter and don't cut down the mouth. Paint it spotty!

What other sharks can you make? How about a hammerhead?

TIP: Not all cardboard rolls are easy to peel a layer off. If you have trouble, cut all the shark's fins and its tail from paper instead.
